

Accelerate Your Digital Transformation

Move Forward Faster

Wide area networks are moving forward faster than ever before with the significant benefits enabled by Software-Defined WAN technology.

Now organizations needing to support their branch offices with increased bandwidth, flexibility and security can deliver premium network experiences using low-cost Internet bandwidth.

Harness the Power and Savings of SD-WAN

SD-WAN simplifies network operation using a single multi-service networking platform that address current needs and can easily scale to accommodate future growth.

Key Benefits

Increased Bandwidth and Agility

Meet new demands created by cloud connectivity, mobile, and video traffic with the attractive price-to-performance gains of the Internet.

Reduced Cost

Seamlessly augment your MPLS with Internet links instead of new MPLS VPN services to save 50% or more depending on circuit availability and pricing specific to your geography.

Application Performance

Identify and prioritize applications over your WAN and automatically change traffic flows according to business policy.

Security

Achieve the same level of security on your public Internet and wireless connections as your private WAN using SD-WAN's end-to-end policy-based security approach.

Scalability

Centralized management enables expansion to thousands of sites and any size branch location while maintaining tight control.

Zero Touch Provisioning

Add new sites or make network changes easily and quickly.

Get on the FAST TRACK

SD-WAN with Acumatic lifecycle support makes it easy to reduce costs while gaining more bandwidth.

Why Acumatic?

Leverage Acumatic's 33+ years of experience delivering lifecycle network support and our range of SD-WAN services that ensure your success.

No need to expend time and resources to tackle the daunting task of assessing and selecting the right components you need. Acumatic's experts deliver a total SD-WAN solution that's right for your business including:

- Consulting
- Implementation
- Monitoring and ongoing management
- Software, hardware and broadband circuits from partners in Acumatic's SD-WAN Ecosystem

SD-WAN Service Portfolio

CONSULTING

Acuative provides a clear vision of the best SD-WAN strategy for your business and mitigates the risk of transformation. All key business, security, and design requirements are identified including application mapping and profiling, Total Cost of Ownership, site locations, and circuits in addition to evaluation of current technology. Deliverables include creation and validation of high and low level designs, selection and validation of vendor software and hardware to ensure requirements will be met.

IMPLEMENTATION

Minimizing risk and ensuring operational readiness with end-to-end service delivery including hardware, software, and circuit procurement, staging, logistics for all devices, site surveys, site readiness, pilots, deployment, and dedicated project management.

MONITORING, MAINTENANCE AND ONGOING MANAGEMENT

Assures level of service and compliance: Training, proactive monitoring/management from Acuative's 24/7 Global Technology Center, remote diagnostics and resolution, on-site maintenance, change management, capacity management, reporting and analytics.

Acuative's SD-WAN Ecosystem

Our solutions feature industry-leading technology from providers who were selected for their innovative and proven approaches to SD-WAN.
